

M4_set Reference-whitened settling distance — three reference variants

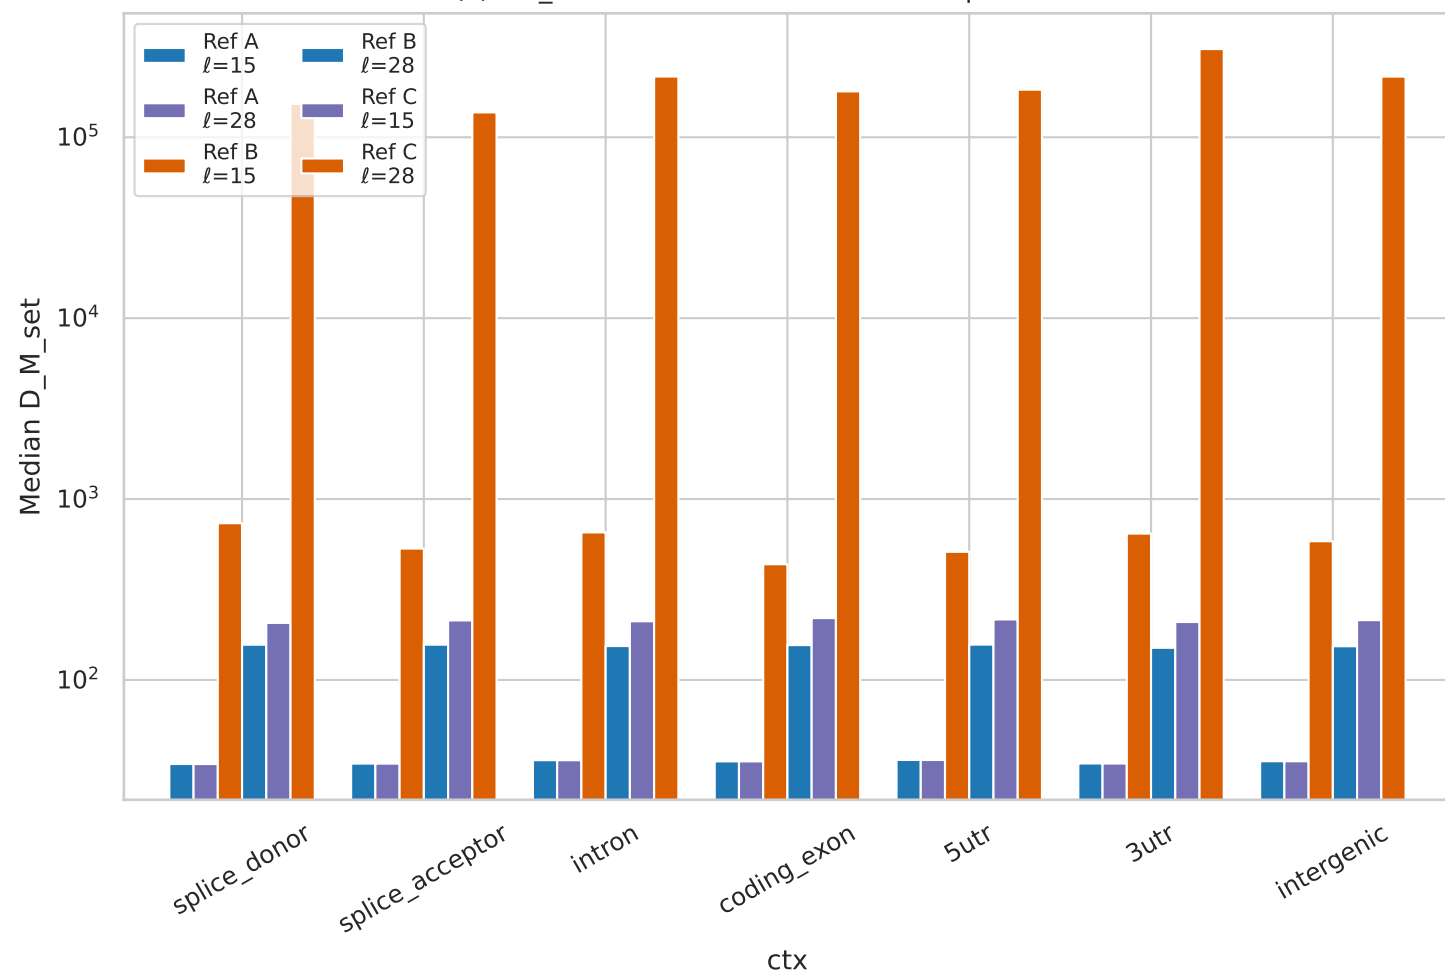

(a) M4_set Ref A — monotone decrease toward 0 at $\ell=29$ (by design)

(b) $\log_{10}(D_{M_set}^A)$ per context $\times$ layer

(c) M4_set Ref A/B/C at $\ell=15$ vs $\ell=28$ per context

(d) Population mean D_{M_set} per ref variant
Monotone-decreasing by Σ_{ref} -whitening construction
